ABOUT

Hi, I am a **part-time third-grade student** at the College Of Economics And Computer Science in Cracow in the field of **Applied Computer Science (engineering degree)** where I learned the solid basis of **React.js**, **Node.js**, and how to **manage** projects and how **modern apps** work. My main goal is to finish an engineering degree, the project I am developing with my friend. I am highly motivated to learn and grow as a **JavaScript** developer. I believe my budding skills and enthusiasm make me a **promising candidate**.

EXPERIENCE

Apprentice Frontend Developer

iDel.pl | Limanowza

06.2023 - 15.09.2023

I completed a professional internship at this company. During the internship, I developed my skills related to **working with clients** and acquired knowledge related to creating web applications. I was working with **React.js**, **Sass** and with their own **CMS**.

PROJECTS

Remake Studio

<https://remake-studio.netlify.app/>

My main goal was to learn the basics of **Next.js** and to learn how to create a **smooth full-stack project** with more complex user interactions. It allowed me to understand how **SSR and SSG** work and how to manage **3rd party authorization (via Next-Auth, OAUTH providers)**. It will help me in my future projects even if they are not written in next.js. Furthermore, I got acquainted with **tailwind css** and the power of inline attributes in react components.

The Pod of Cast

<https://podofcast.netlify.app/>

The main goal of this project was to recreate **team** workflow. I have found a free **Figma** template and built it from scratch. Projects like this one, **simulate** work with an actual graphic designer and his imposed style. The website follows **SEO** and **responsive CSS** practices, which combined with smooth **animations**, and **semantic** rules of **HTML** in a smooth **user experience** on a wide range of devices.

P.Electric

<https://pelectric.pl>

The P.Electric website is my **first commercial project**. I built it from scratch starting with projects, **consulting with client**, writing the website, and **adjusting** the website to the client's needs. I have **learned** how to set up projects on **live servers**, how to work with clients, and also I have implemented a **new library** mainly for easier animations development.

I hereby consent to my personal data being processed by (company name) for the purpose of considering my application for the vacancy advertised under reference number (123XX6 etc.) and for the purpose of the future recruitment processes.

LANGUAGES

- POLISH - NATIVE
- ENGLISH - B2 - INTERMEDIATE

SKILLS/TECH STACK

- HTML5, CSS3
- Tailwind/Sass
- JavaScript, ES6+
- Typescript
- React.js
- Node.js, Express.js
- RWD
- RestAPI
- Reading documentation to either learn or improve
- Will to further improve and explore new ways of front-end design

TOOLS

- GIT/Github
- NPM
- Webpack/Vite
- Figma for working with layouts
- Postman to work with complex RestAPIs
- VSCode with Extensions
